E8 - FIELD TRIP TO LANDSCAPE AND SOILS IN MOUNTAIN AND COASTAL REGIONS OF RIO DE JANEIRO STATE

Summary:
The field trip will cover landscapes and soils from the mountain to coastal regions of the Rio de Janeiro State. It has the purpose of showing the main soils, the geomorphology, vegetation and the different land usages. The human contribution to soil formation or modification will be observed in a Sambaqui (archaeological site, related to fishermen and gatherers of the Tupinambá ceramic ancestral groups).

Period:
Post event; 18 to 21th August, 2018. Departure from the Windsor Conventions & Expo Center at 7:30 am; approximately 500 km in four days.

Guides:
Drs. Ademir Fontana and Wenceslau Geraldes Teixeira (Researchers – Brazilian Agriculture Corporation – Soil Center - EMBRAPA).

Contact:
Drs. Ademir Fontana: e-mail: ademir.fontana@embrapa.br; Wenceslau Geraldes Teixeira: e-mail: wenceslau.teixeira@embrapa.br.

Attention:
All participants are responsible for their travel to the meeting point at the beginning of the tour in Rio de Janeiro city. Comfortable clothes and hiking footwear, sun protection (hats or caps, UV protection lotion), and a personal backpack are recommended.

Places to be visited - scenic points

Dedo de Deus (an unique geological formation with a privileged view of Guanabara bay)

Praia do Forte (gorgeous beach with fine sands)
Landscape and site description:

1º Stop Valleys:
Sandy and peat soils. Local relief - flat to slowly undulating. Quaternary sediments

2º Stop
Mountain range:
3° Stop

**Sambaqui:**
Soils modified by human actions (addition of shells, bones, charcoal etc)
Fluvial-marine environment

4° Stop

**Coastal Tableland:**
Deeply weathered soils, kaolinitic and low iron clays.
Clayey sediments from Tertiary period;
Flat to slightly undulated relief.

5° Stop

**Coastal Plains:**
Sandy soils and Spodosols
Marine sand rich sediments from Quaternary.

6° Stop

"Sea of hills" landscape:
Clay enriched soils, deeply weathered;
Formed from Pre-Cambrian acid igneous rocks and the sediments derived; Undulating hills called “half oranges”.
